Application: Standard plastic tracks are primarily used to guide and support ANSI double pitch chain in packaging and drag chain conveying systems. Experience has shown that the best way to distribute the load and increase capacity is to support these chains on a flat edge of the side plates. These UHMW based products provide low friction surfaces with outstanding wear resistance when the load is distributed in this manner.

Material: White UHMW.

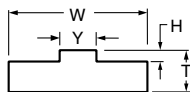

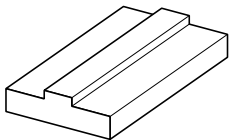

Drive Rivets for fastening item description, VG-750, go to:
