## Power-Wedge ${ }^{\circ}$ Cog-Band ${ }^{\circ}$

1 Oversized Polyester Cord
Adds belt strength and stability during peak shock loads. Chemically treated for maximum resistance to belt stretch.

2 Raw Edge Sidewalls
Produce a higher coefficient of friction. They grip the pulley more tightly to reduce slippage while improving overall performance and efficiency.

3 Precision Molded Cogs
Improve belt flex, reduce bending stress, help dissipate heat and contribute to longer belt life.

## 4 Double Ply Tie-Band

Two-layer highly engineered tie-band permanently bonds or "ties" multiple belts together. This assures smooth operation enabling the belts to function as a single unit, with even load distribution and wear. Vibration is dampened. Heavy shock loads are absorbed. Belt whip and turnover are eliminated.

Raw Edge construction
Eliminates belt whip and turnover

Higher horsepower
Longer belt life
Oil and heat resistant

Static dissipating
Applications:
Fans
Pumps
Compressors
\& More

[^0]
## Power-Wedge ${ }^{\circ}$ Cog-Band ${ }^{\circ}$ Banded Belt

Designed to minimize belt whip and turnover on the drive, the Power-Wedge ${ }^{\circledR} \mathbf{C o g}$-Band ${ }^{\circledR}$ provides outstanding resistance to oil, heat and harsh environments.

The Power-Wedge ${ }^{\circledR}$ Cog-Band ${ }^{\circledR}$ permanently bonds the individual elements together to assure prematched size and quality. Belt whip and turnover are eliminated. Vibration is dampened. Shock is absorbed.

The long life and performance of the cog-belt is combined with banded stability. The unique laminated construction combines the superior flexing of precision molded cogs with the gripping power of raw edge sidewalls. The result, a perfect balance of controlled transfer of power and slippage.

Recommended for applications requiring increased horsepower or speed, or where unusually severe shock loads are encountered.

For complete part number, add number of ribs required as indicated in example provided.

## Horsepower Per Rib Comparison
