## Selecting Industrial Control Transformers

To make the proper transformer selection, the load must be completely analyzed... which involves every electrically energized component in the control circuit.

All electromagnetic control devices have two current requirements; the first to energize the coil; the second to maintain the contact for a definite period of time. The initial energizing of the coil, which takes 5 to 20 milliseconds, requires many times more current than normal. This is referred to as volt-ampere inrush... which is immediately followed by the sealed volt-amperes-the amount of current required to hold the contact in the circuit.

## Easy, five step selection

1. Determine the voltage and frequency of supply circuit: Example: 460 Volts, 60 Hz .
2. Determine the total inrush VA of the control circuits from the manufacturer's data or the contactor data table. Do not neglect the current requirements of indicating lights and timing devices that do not have an inrush VA but are energized at the same time as the other components in the circuit. Their total VA should be added to the total inrush VA.
3. Refer to the regulation data chart. If the supply circuit voltage (Step 1) is reasonably stable and fluctuates no more than $\pm 5 \%$, refer to the $90 \%$ Secondary Voltage column. If it fluctuates as much as $\pm 10 \%$, refer to the $95 \%$ Secondary Voltage column. Go down the column you have selected until you arrive at the inrush VA closest to, but not less than, the inrush VA of your control circuit.
4. Read to the far left side of the chart and you have selected the continuous nominal VA rating of the transformer needed. The secondary voltage that will be delivered under inrush conditions will be either $85 \%, 90 \%$, or $95 \%$ of the rated secondary voltage-depending on the column selected from the regulation data chart. The total sealed VA of the control circuit must not exceed the nominal VA rating of the transformer selected from the manufacturer's data or the contactor's data table.

TABLE 1. Inrush VA

| Nominal <br> VA Rating | Inrush VA @ 20\% \& 40\% Power Factor |  |  |  |  |  |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  | 85\% Secondary Voltage | 90\% Secondary Voltage | 95\% Secondary Voltage |  |  |  |
|  | $\mathbf{2 0 \%}$ P.F. | $\mathbf{4 0 \%}$ P.F. | $\mathbf{2 0 \%}$ P.F. | $\mathbf{4 0 \% ~ P . F .}$ | $\mathbf{2 0 \%}$ P.F. | $\mathbf{4 0 \%}$ P.F. |
| 50 | 362 | 224 | 289 | 179 | 217 | 134 |
| 75 | 579 | 354 | 462 | 283 | 345 | 211 |
| 100 | 839 | 522 | 664 | 413 | 489 | 304 |
| 150 | 1326 | 842 | 1003 | 637 | 679 | 431 |
| 250 | 3447 | 2281 | 2462 | 1629 | 1477 | 977 |
| 300 | 3894 | 2618 | 2812 | 1890 | 1731 | 1163 |
| 350 | 5418 | 3689 | 3870 | 2635 | 2322 | 1581 |
| 500 | 6496 | 4575 | 4691 | 3304 | 2887 | 2033 |
| 750 | 8377 | 5811 | 5913 | 4102 | 3449 | 2393 |
| 1000 | 11329 | 9005 | 7789 | 6191 | 4248 | 3377 |
| 1500 | 25519 | 18803 | 18013 | 13273 | 10508 | 7742 |
| 2000 | 28178 | 21600 | 19372 | 14850 | 10566 | 8100 |
| 3000 | 34797 | 28391 | 24562 | 20041 | 14328 | 11690 |
| 5000 | 138500 | 84542 | 100000 | 61058 | 61550 | 37574 |

TABLE 2. Typical Magnetic Motor Starter \& Contactor Data (1) 60 Hz, 120 Volt, 3-Pole

| Contactor |  | N.E.M.A. Size |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
